WEAVER DIGITAL

Getting your domain name

A step-by-step guide to buying your domain name, like yourbusiness.com, at Porkbun and connecting it to your new website.

1. Create your account
2. Find and buy your name
3. Connect it to your website

About 15 minutes
Go at your own pace

About $11–12 a year
for a .com, paid to Porkbun

Yours, in your name
You own it outright

BEFORE YOU START

Have these ready

@

Your business email

Porkbun sends receipts and renewal notices here.

$

A credit or debit card

About $11–12 for the first year of a .com.

✎

Two or three name ideas

Not sure? Send them to us first and we'll check.

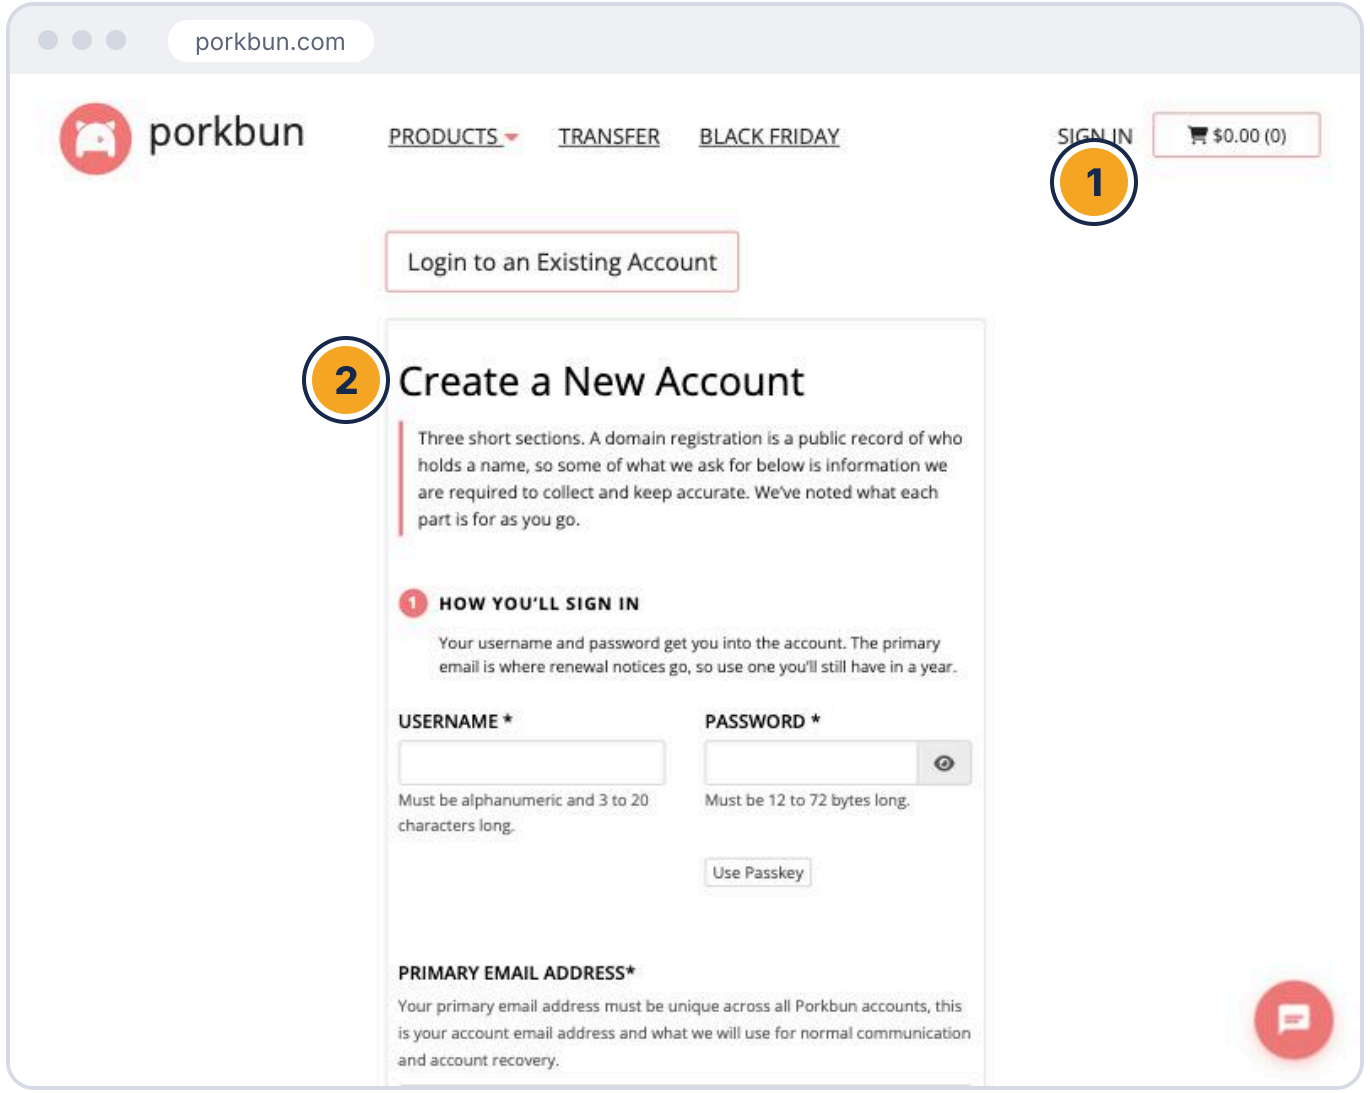

> **Why you buy it, not us:** it's registered in your name, so it stays yours whatever happens. We never hold your domain name.

STEP 1

Create your Porkbun account

1. Go to **porkbun.com** and click **SIGN IN** at the top right.
2. Fill in **Create a New Account**: a username, a password, and your business email.
3. Use your real name and address. Every domain name needs them on record.

> Save your username and password somewhere safe. You'll need them to renew or make changes.

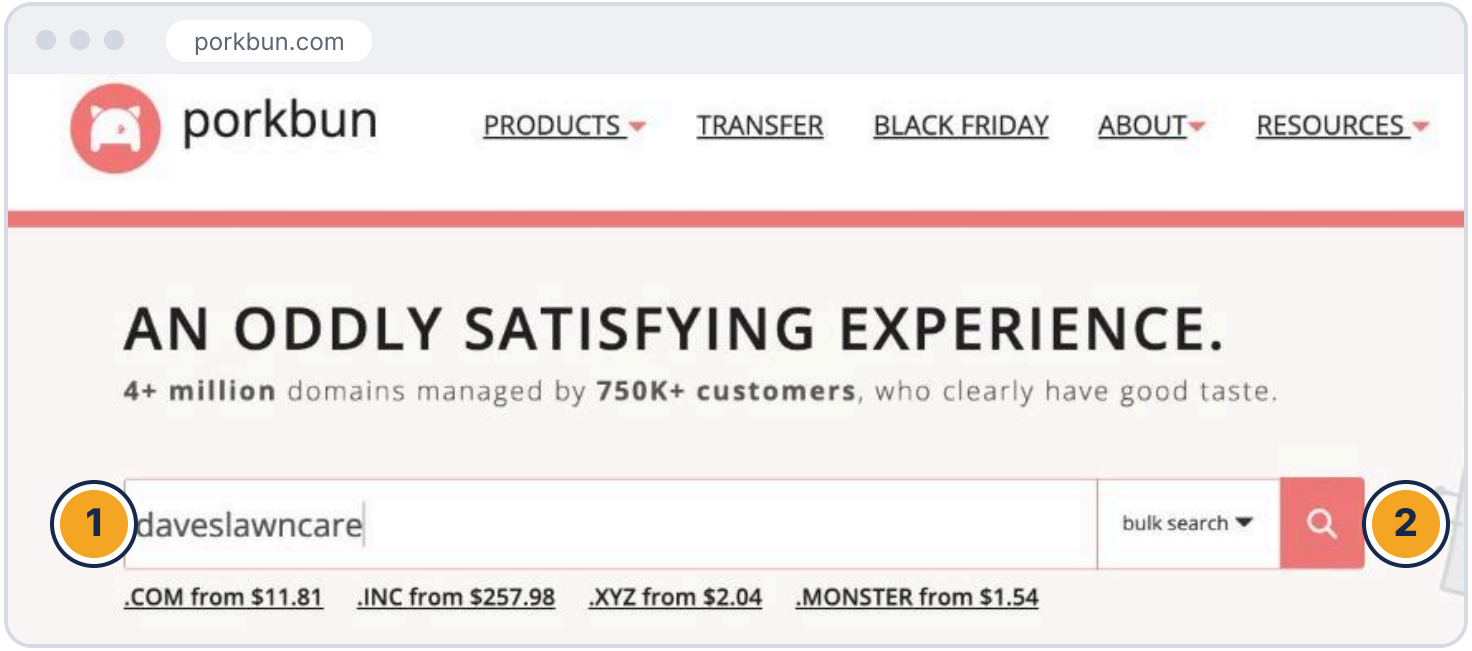

STEP 2

Search for your name

1. Type the name you'd like into the **Find your domain...** box.
2. Click the **magnifying glass**.

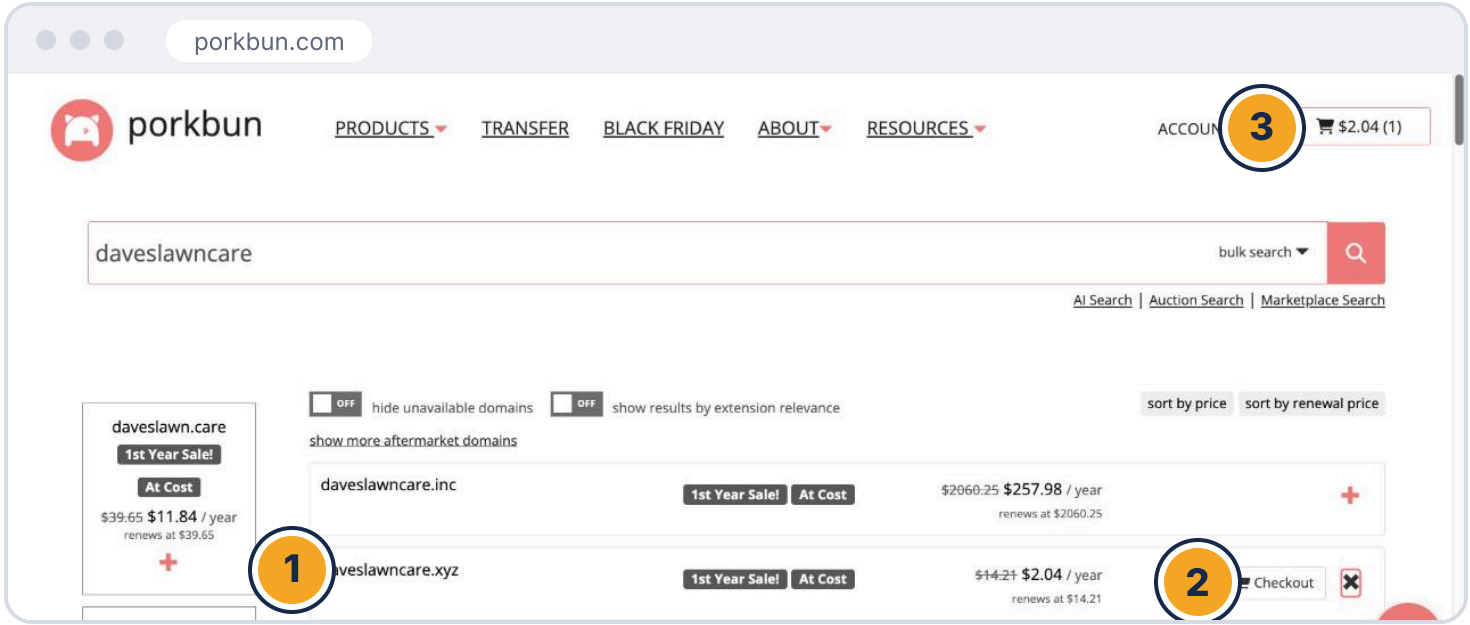

> Try your business name with **.com** first. Short, easy to say over the phone, no hyphens.

STEP 2

Add it to your cart

1. Find the domain name you want in the results. A **.com** often shows in its own box on the left.
2. Click the **+** beside it. A **Checkout** button and an **✕** appear.
3. Click **Checkout**, or the cart total at the top right.

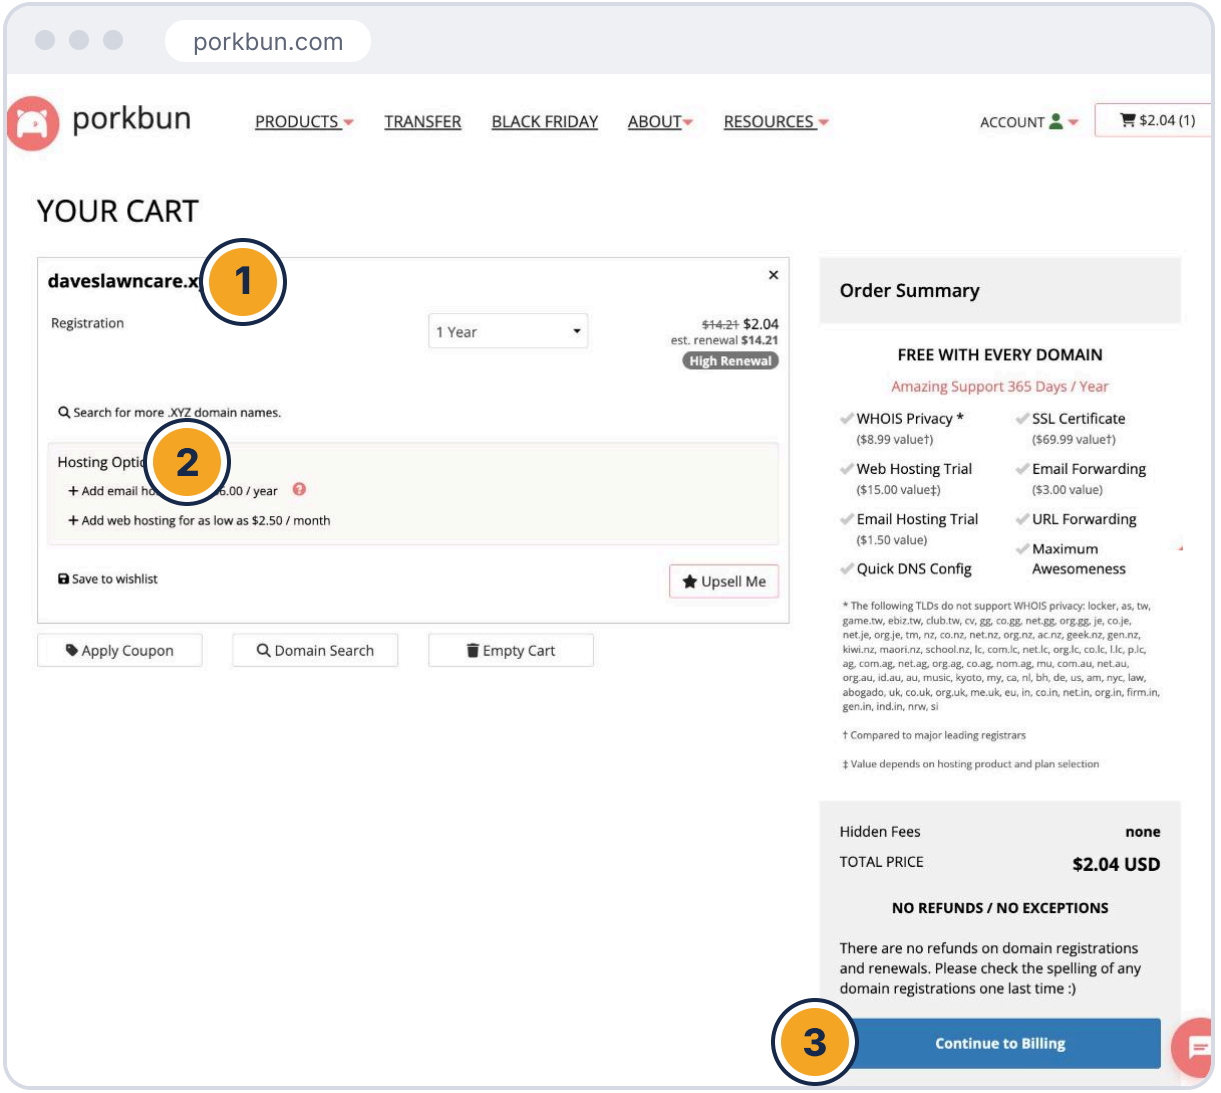

> Taken? Try a shorter version, or a local ending like **.ca**. Added the wrong one? Click the **✕**.

STEP 2

Check your cart

1. **Double-check the spelling.** Porkbun gives no refunds, and a domain name can't be changed later.
2. **Skip the extras:** email hosting, web hosting and Upsell Me. We handle your website.
3. Click **Continue to Billing**.

> A **High Renewal** badge means next year costs more than this year. A .com stays about the same.

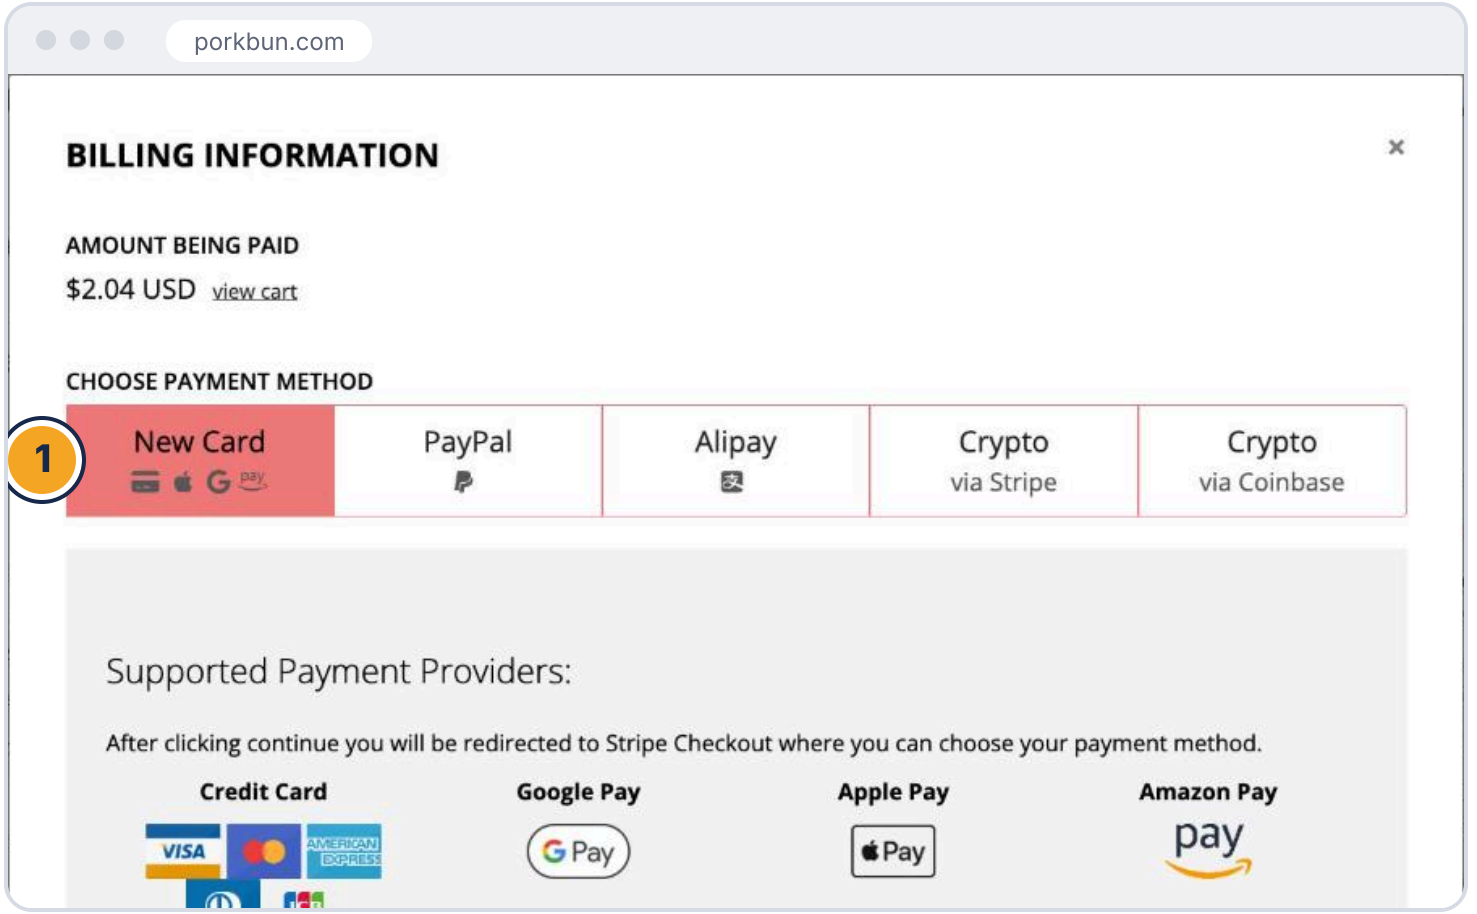

STEP 2

Pay

1. Choose how to pay. **New Card** covers credit cards, Google Pay and Apple Pay.
2. Click continue, and pay on the secure Stripe checkout page Porkbun sends you to.

> Next you'll see **GREAT SUCCESS** and some hosting offers. Skip them and click **Continue to Domain Management**. WHOIS privacy and auto-renew are already on.

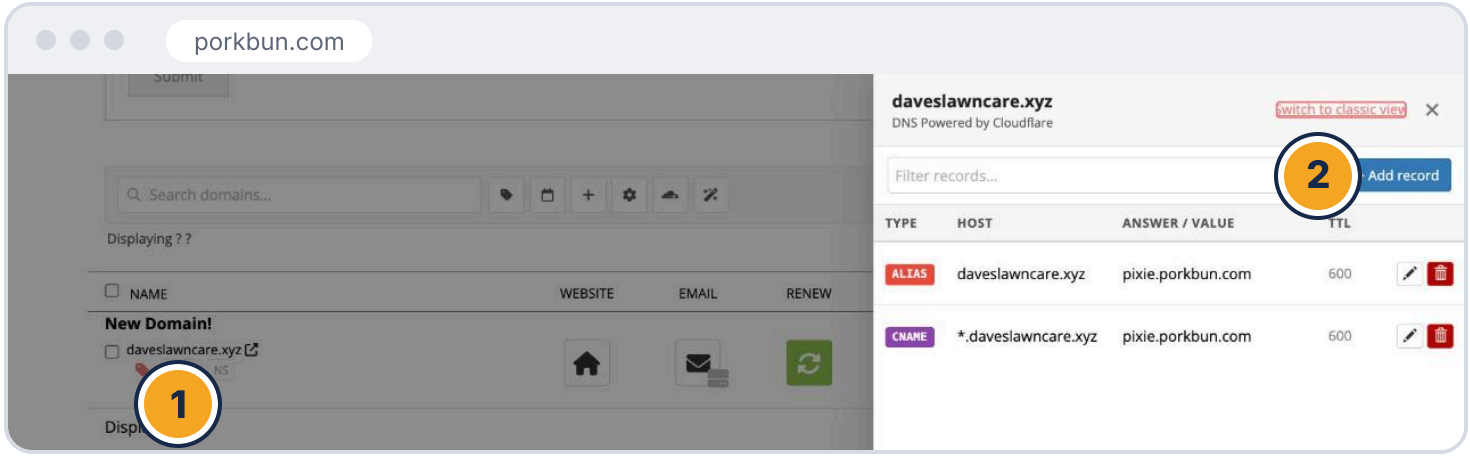

STEP 3

Open your DNS settings

1. On **Domain Management**, click **DNS** under your new domain name.
2. In the panel that opens, click **+ Add record**.

> DNS is what tells the internet where your website lives. You set it once, here.

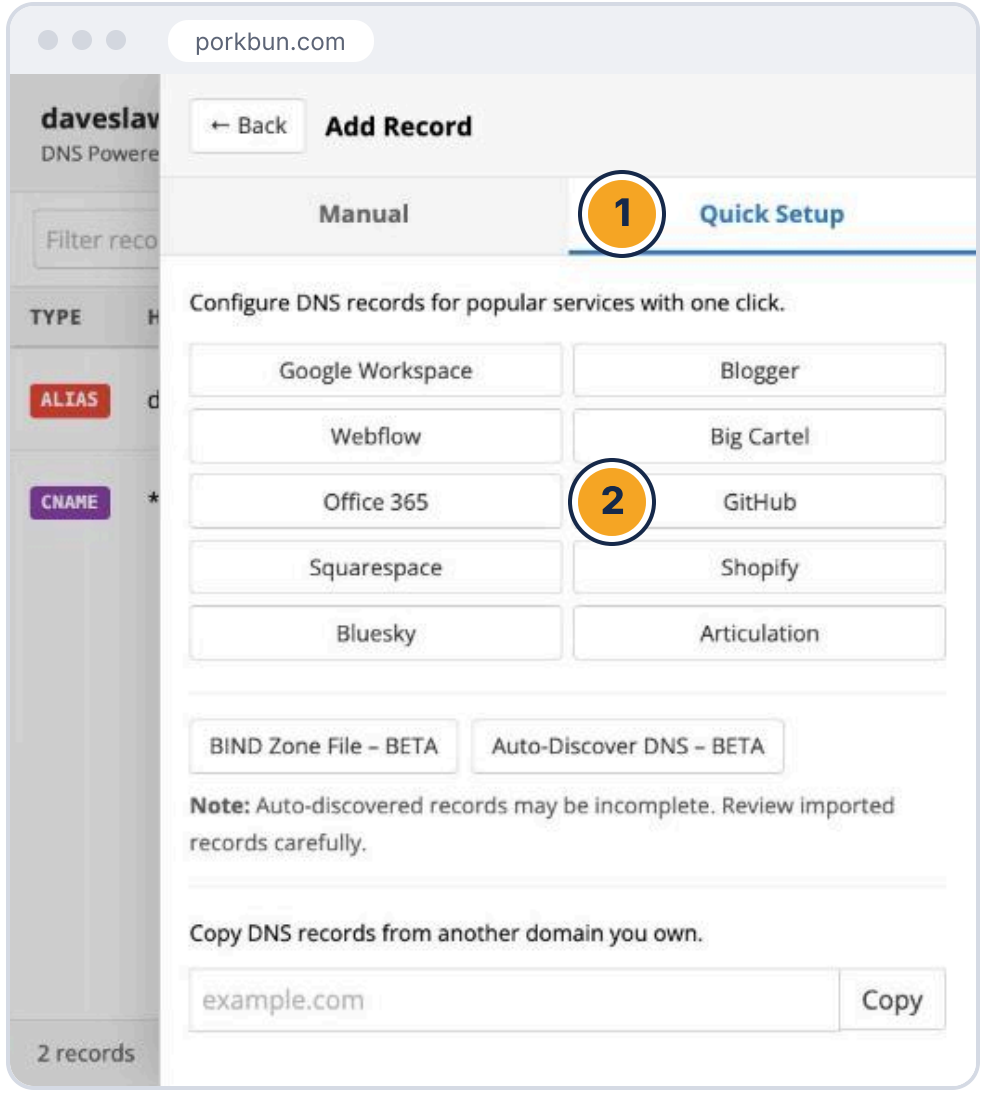

STEP 3

Choose GitHub

1. Click the **Quick Setup** tab.
2. Click **GitHub**.
3. Your browser asks if you're sure. Click **OK**.

> Your website is hosted on GitHub Pages, so this is the right choice even if you've never heard of GitHub.

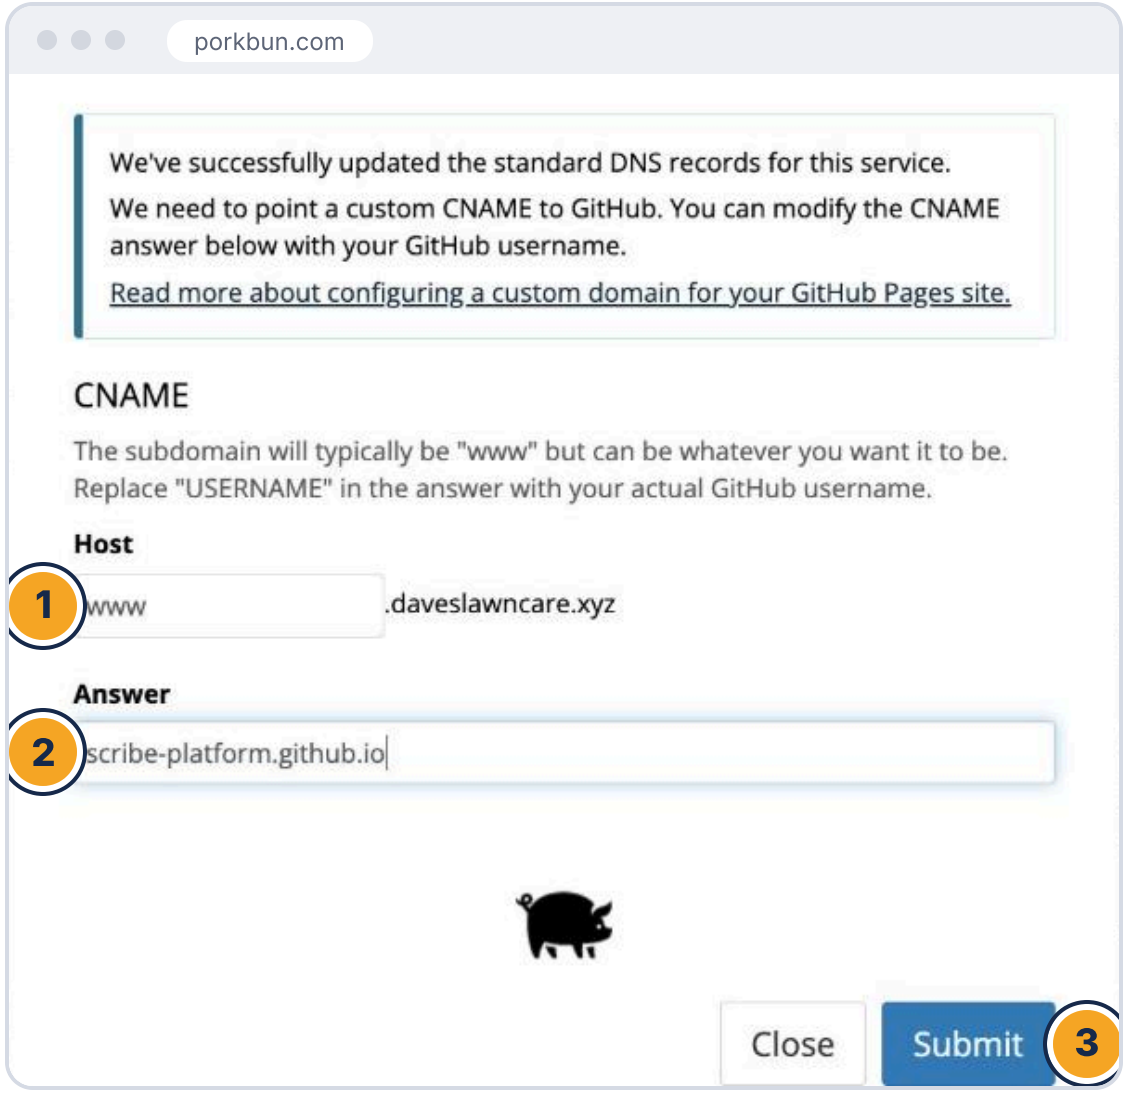

STEP 3

Point www at your website

1. Leave **Host** as **www**.
2. In **Answer**, change USERNAME.github.io to **scribe-platform.github.io**.
3. Click **Submit**. The window closes, and you're done.

> Porkbun set up your main domain name when you clicked OK. This adds **www**, so both versions work.

ALL DONE

Send us a quick note

Email us the domain name you bought. We'll finish the connection on our side and let you know the moment your website is live, usually within a day.

(717) 406-7936

> **We also recommend** turning on two-factor sign-in (ACCOUNT → Settings / Billing → Security and sign-in). It stops anyone taking over your account, and your domain name with it.

CHECKLIST

- [ ] Porkbun account created
- [ ] Domain name bought (privacy and auto-renew on)
- [ ] Connected with DNS → Quick Setup → GitHub

Stuck on a step? Call us, and we'll walk through it with you.
